

Tong Ye (Niklaus) Zhang

GAMES RESEARCH · GAME DESIGN · TECHNICAL ART

PROFILE

Games researcher and designer bringing research, design and teaching experience to technical art. My research examines how developers and players negotiate difficulty and time, through a master's thesis at the University of Toronto and a peer-reviewed paper with the Canadian Game Studies Association, and has since been developed into the Difficulty Design Vault, a teaching tool for game-design courses. As a designer, I have created a narrative action demo and a competitive and co-operative board game, and I mentor students through every stage of their own game and animation projects, from initial concept to finished work. As a lifelong player, I bring a lasting curiosity about how games are built and why they feel the way they do. Native speaker of English, Cantonese and Mandarin.

SELECTED WORK

Student Portfolio Mentoring · Unreal Engine, TouchDesigner, Raspberry Pi, Arduino Ongoing

- Guide study-abroad applicants through every stage of a game or animation portfolio, from topic selection to final layout. Students carry out all production work; each tool is taught as the project requires it.
- *Hallucination*: first-person narrative puzzle game in Unreal Engine, with a clue board, inspectable items and code-lock puzzles implemented in Blueprints.
- *Sigil of Catharsis*: interactive virtual scene with characters modelled in Maya and a strike interaction driving Niagara particles, material changes and lighting transitions in Unreal Engine.
- *Greed*: short animation with landscape and underwater materials built in Unreal Engine, and props modelled in 3ds Max and textured in Substance Painter.

Difficulty Design Vault · extension of master's thesis, in use in game-design courses 2026

- Extended the Negotiated Difficulty Framework from my master's thesis into a bilingual (English and Chinese) knowledge base of difficulty mechanisms, designed, built and maintained independently.
- Used as a teaching tool in game-design courses: students analyse a difficulty mechanic from a game they know, and each analysis is split into statements and coded against the framework's three layers and seven negotiation dimensions, with consent kept separate from grading.
- Publishes evidence-graded design guidance for small development teams through a mechanism library, a recommendation tool and a public claims registry, in which each of the thesis's claims can be confirmed, revised or retired as evidence accumulates.

Decypress · narrative action demo, Unity 2021

- Wrote the story, lore and dialogue, composed the original soundtrack, and designed collectibles, progression triggers and environmental storytelling across four levels, in collaboration with Scott Warren (Sayincraft Studios), who led programming and visuals.

Dive Down the Dungeon Deep · competitive and co-operative board game 2023

- Led a five-person team as project manager and core mechanic designer, defining the rules, board layout, and shared and individual win conditions; revised the action economy and turn pacing after two rounds of playtesting with 36 players.

RESEARCH

Here Be Lions · Master's thesis, University of Toronto 2025

Reframing Challenge Design and Difficulty Adjustment as Negotiation in Video Games

- Synthesized 8 developer interviews, discourse analysis of 590+ player comments and comparative case studies of 35 games into the Negotiated Difficulty Framework, which now underpins the Difficulty Design Vault.

Captive Audience · Peer-reviewed paper, Canadian Game Studies Association 2023

A Study in Time and Player Experience in Online and Paper Magic: The Gathering

- Field study of 42 players across 200+ games at 5 locations, identifying competitiveness as a key modulator of flow.

EXPERIENCE

UX/UI Engineer · China Telecom Global, Hong Kong Jul 2026 – Present

- Research and design the interfaces for five concurrent applications for the Hong Kong Fire Services Department and Transport Department, including administrative systems, an intranet, member-facing apps and internal tools.
- Coordinate front-end delivery across these applications in a de facto product-management capacity, from user research and interface design through developer handoff and client review.
- Produce build-ready HTML prototypes for React and Flutter developers and remain involved through implementation, repository review and quality assurance.
- Authored close to 1,000 audit-ready UAT test cases to government SLC standards, and provided onsite delivery at a client data centre under restricted tooling.

Teaching Assistant · University of Toronto 2023 – 2024

- Mentored 12 student teams through playtesting and Figma-based UX research, provided written feedback and thematic analysis on 120+ reports, and led weekly game-design tutorials for students from mixed backgrounds.

Localization & Creative Direction Associate · Oak Smart Advertising Media (part-time) 2018 – 2025

- As assistant creative director, led trilingual campaigns for clients including China Unicom Hong Kong, coordinating online content with offline events from planning through delivery.

EDUCATION

Master of Information · University of Toronto 2025

Culture & Technology and User Experience Design concentrations, thesis pathway

Bachelor of Arts · University of Toronto Mississauga, joint program with Sheridan College 2023

Communication, Culture, Information & Technology; Certificate in Digital Communications, Sheridan College

SKILLS

Engines & 3D Unity, Unreal Engine, Godot, TouchDesigner

Physical computing Raspberry Pi, Arduino

Programming & web Python, JavaScript, SQL, HTML, CSS, React, Flutter

Design & research UX research, playtesting, Figma, FigJam, Photoshop, Illustrator

Project delivery Agile / Scrum, Jira, Git, GitHub

Languages English, Cantonese and Mandarin (native); Japanese (conversational)

Competitive play Guilty Gear Strive / Street Fighter 6 peak global rank #142; Hearthstone Legend; MTG Grand Prix Vancouver Day 2 (top 15%); MTG Arena Mythic
